- To: Telluride Foundation
- From: Andrew Knudtsen and Tim Morzel; Economic & Planning Systems (EPS)

Subject: Rural Housing Initiatives Economic Impact Analysis

Date: March 6, 2021

This memorandum provides a summary of the economic impacts associated with three projects that are part of the Rural Housing Initiative's pilot program. Economic & Planning Systems (EPS) was contracted by the Telluride Foundation to provide an evaluation of the economic impact that each of the three projects have on the regional economy. The following key components are included in this memo:

- About EPS
- Program Overview
- Summary of Economic Impacts
- Impact of School District Staff Turnover

A detailed summary of the supporting analysis is provided in the Appendix of this memorandum.

The Economics of Land Use

About EPS

Economic & Planning Systems, Inc. (EPS) is a land economics consulting firm experienced in the full spectrum of services related to real estate development, the financing of public infrastructure and government services, land use and conservation planning, and government organization. EPS was founded on the principle that real estate development and land use-related public policy should be built on realistic assessment of market forces and economic trends, feasible implementation measures, and recognition of public policy objectives, including provisions for required public facilities and services. The firm focuses on a wide range of practice areas that include but are not limited to the following:

- Real Estate Economics
- Public Finance
- Land Use and Transportation
- Economic Development and Revitalization
 Parks and Open Space Economics
- Fiscal and Economic Impact Analysis
- Housing Policy
- Public-Private Partnership (P3)

EPS has been serving public and private sector clients since 1983 and has provided consulting services to hundreds of public- and private-sector clients in Colorado and throughout the United States. Clients include cities, counties, special districts, multijurisdictional authorities, property owners, developers, financial institutions, and land use attorneys. EPS has specifically worked with the Telluride Foundation on a range of projects addressing attainable and workforce housing in communities throughout the southwest Colorado.

Program Overview

Like much of the country, Colorado faces an affordable housing crisis, which is particularly acute in rural areas. Developing affordable rural projects is often infeasible due to higher construction costs, low rents, inability to compete for capital, and lack of development capacity, from planning to property management. Project costs can be 40 to 50 percent higher than completed appraised values – driving up sales prices and rents.

The Telluride Foundation has assembled statewide public, private and philanthropic partners, Colorado Department of Local Affairs, Colorado Housing Financing Authority, Colorado Health Foundation, developers/home builders, and Economic & Planning Systems ("Coalition"), to help jump-start development of affordable rental and ownership housing in rural communities; the Coalition is developing a turnkey planning, construction, financing, and management model for rural communities across Colorado. While the pilot program is currently focused on communities in southwest Colorado, the larger goal is to develop a program that can be applied statewide. The current pilot program focuses on three communities that include Nucla, Norwood, and Ridgway, as Figure 1.

In each of these communities, the Telluride Foundation is working closely with local partners to identify appropriate sites that may be able to accommodate 15 to 25 rental or ownership units affordable for households earning between 60 percent and 120 percent of local area median income (AMI), as shown in **Table 1**. Current development concepts are centered at the middle of that range with the majority of units priced at levels affordable for households earning between 60 percent and 80 percent of local AMI.

Summary of Economic Impact Analysis

The economic impact of the development of each of the three projects includes the increase in economic output and employment associated with the construction of the project and the ongoing personal spending of the new residents. These impacts are described in fuller detail below:

- **One-Time Construction Impacts** Construction projects generate direct, indirect, and induced impacts on the larger economy in which the project occurs. These impacts sum to the total estimated economic impact of the construction project. These are one-time impacts that occur during construction.
- **Ongoing Personal Spending Impacts** Spending associated with future residents generate induced impacts in the regional economy through daily personal spending. These are ongoing impacts that occur as households occupy new homes and continue indefinitely as these households remain in the community or are replaced by new households as they move on to other areas.

Methodology

The IMPLAN model (Impact Analysis for Planning) was used to estimate the impacts in this analysis. The IMPLAN model is based on a matrix that describes the relationships (transactions) between industries, commodities (goods and services), and institutions (households, government, etc.). IMPLAN calculates the direct, indirect, and induced impacts of an economic event, defined as follows:

- **Direct Impact** Direct impacts represent the value or impact of the action taken, in this case the impact of the one-time construction spending and the future jobs occupying the commercial development. In addition, this accounts for the personal daily spending that occurs within the development. Direct impacts represent the value of the entire project including supplies, worker compensation, and other direct spending associated with the project.
- **Indirect Impacts** Indirect impacts represent the increases in economic activity by local suppliers necessary to support the direct impact of the project. For example, the construction activity associated with the development of Upland will result in an increase in demand for additional employment and business services, which will in turn increase their purchases from their suppliers. This cycle of increased spending in the economy resulting from the direct impact represents the indirect impact.
- Induced Impact Induced impacts (often referred to as the multiplier effect) represent the impact from the spending of household income derived from wages generated by the direct and indirect effects. Induced impacts include all varieties of household expenditures such as retail purchases, services, housing, and transportation expenditures.

The impacts in this analysis are estimated for a three-county area that includes Ouray County, Montrose County, and San Miguel. Detailed summary tables that provide estimates of the Project's impact on employment and economic output by sector are provided in the Appendix. Dollar amounts are in producer prices (2021 Dollars) and jobs are reported as full-time equivalents (FTE).

Construction Impacts

Total construction costs (Direct Impact) for each of the sites range from \$3.6 million in Nucla to \$4.7 million in Norwood and Ridgway, as shown in **Table 2.** The economic impacts associated with the construction of all three projects are estimated for the duration of the construction period (estimated at 12 months for each site) and illustrate impacts in the three-county area. Assuming all construction activity takes place within the three-county area, on-site construction activity is estimated to support 25 to 34 jobs per year and generate \$3.6 million to \$4.7 million in direct annual economic output, as shown in **Table 2**. The indirect and induced impacts of the project on the three-county area regional economy is estimated to translate to 9 to 13 jobs per year and \$1.0 million to \$1.5 million in annual economic output.

Description	Nucla	Norwood	Ridgway
Construction Output (Annual)			
Direct Impact	\$3,597,887	\$4,796,955	\$4,796,298
Indirect Impact	\$571,876	\$762,465	\$762,361

Household Impacts

In addition to the employment generated by the commercial development, the households occupying the residential development generate impacts to the regional economy through daily personal spending. These are ongoing impacts that will continue indefinitely. The residents occupying housing units located within all three of these communities will spend money on a variety of sectors in the regional economy. These costs include retail purchases, services, utilities, transportation, and other housing expenditures, all having direct impacts on the three-county region. The household impacts are solely defined as induced impacts.

For the purpose of this analysis, total households are estimated based on the total number of units located within the three communities.

This analysis aligns total household spending with household income levels by AMI, as shown in **Table 3**. Based on an evaluation of the current mix of units by AMI level, the average household income is estimated to range from roughly \$42,000 per year to \$49,000 per year. Multiplying the total income estimates by the number of each type of residential unit results in total annual household income, also known as total personal income (TPI), which is estimated to range from \$720,720 to \$830,720, as shown in **Table 3**.

Description	Nucla	Norwood	Ridgway
Households by AMI			
60% AMI	2.0	7.0	16.0

Total personal income of households residing within each project is estimated to support 5 to 7 equivalent jobs each in three-county region, as shown **Table 4**. Of the total jobs supported by each project, approximately 1.5 to 2 equivalent jobs are estimated to be in the retail trade, accommodation, and food services sectors.

Household spending from households in each of the three communities is estimated to result in \$616,274 to \$720,567 per project of induced impacts in three-county region.

Description	Nucla	Norwood	Ridgway

Property Tax and Sales Tax Revenue

At buildout, each of the three projects are anticipated to generate property tax for regional taxing entities and the local jurisdiction in which they reside. For each of the projects, total annual property tax is estimated to range from \$16,000 to \$20,000 per year, as shown in **Table 5**. Of that total, local towns are estimated to received approximately \$2,600 to \$4,200 in additional annual property tax revenue. In Nucla and Norwood, this would represent an increase in total annual property tax revenue of 5 to 6 percent over existing Town revenues, which would continue in perpetuity.

In addition to property tax, local household spending (estimated at 50 percent of total household spending) is estimated to generate sales taxes for each of the three communities. Additional annual sales tax revenue is estimated to range from roughly \$1,900 per year to \$2,200 per year.

Description	Nucla	Norwood	Ridgway
Sales Tax			
Total Taxable Sales	\$107,895	\$126,154	\$124,362
% Local Capture (Estimate)	50%	50%	50%

School District Staff Turnover

In addition to the economic impacts associated with these projects, it is important to highlight the potential impact that new housing could have on local turnover rates for public agencies, specifically local schools. A recent study completed by the National Association of State Boards of Education noted that while public school districts in Colorado overall had teacher turnover rates of 15.78 percent from 2018–19 to 2019–20, rural school districts reported 17.85 percent turnover. In addition, for the 107 Colorado districts designated as "small rural" (with enrollments of less than 1,000), that figure was 18.1 percent.

These higher turnover rates further illustrate the challenges that rural communities face as it relates to hiring and retaining teachers. Furthermore, turnover is expensive. One study found that, depending on the district, turnover costs per teacher ranged from roughly \$4,400 to \$17,900. While each district faces its own unique set of challenges, this project, which will offer new, quality housing options in these communities, has the potential to lower annual turnover rates and reduce costs incurred by local districts as they seek to hire new staff.

Finally, it is important to highlight the fact that additional school aged children that attend local schools will generate additional revenues for those schools. The State of Colorado calculates a per pupil allocation for each of the school districts through the State. In the three communities evaluated in this analysis, that allocation ranges from roughly \$12,700 per pupil to \$15,200 per pupil, as shown in **Table 6**. Based on a range of 0.30 to 0.50 school aged children per household, the current State funding allocation is estimated to translate to additional revenues of roughly \$62,100 to \$103,500 per year in Nucla, \$91,200 to \$151,900 per year in Norwood, and \$75,900 to \$126,600 per year in Ridgway.

Description	Nucla	Norwood	Ridgway
